**ABSTRACT**

Disclosed is a TGC method for inducting targeted  
somatic transgenesis in an animal host, whereby bacteria  
with a foreign DNA integrated into an episomal vector  
10 release, under the control of eukaryotic regulatory  
elements for ulterior transcription and expression, said  
foreign DNA in the case of infection of a foreign organism,  
organ, tissue, cell line or individual cells, causing  
transcription and expression of foreign DNA and/or foreign  
15 protein in said location.
